DETAILED ACTION

Status of Claims

1. This action is in response to the decision rendered by the BPAI filed on 23 March 2005, followed by the office action mailed on May 25, 2006 and the response filed by the applicant on December 1, 2006. Entire prior office actions are incorporated herein by reference. In particular, the observations with respect to claim language, and response to previously presented arguments.

- Claims 15-17, 23 and 26-28 have been amended.
- Claims 1-14 and 19-22 have been canceled.
- Claims 15-17 and 23-28 have been allowed.

Drawings

2. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the current filed drawings are not sufficiently legible and clear as to be placed in the published patent as required by the MPEP. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Allowable Subject Matter

3. Claims 15-17 and 23-28 are allowed. See Reasons for Allowance under separate heading.

Reasons For Allowance

4. The following is an Examiner's statement of reasons for allowance:

None of the art of record, taken individually or combination, disclose at least the limitation of linking a task with a feature.

Claims 15, 23, and 26 are distinguished over the closest prior art of "User's Guide for Microsoft Project" (1995), which teaches a project management software system. As shown in independent claims 1, 23, and 26, it is deemed that the Applicant's invention is distinguished over the Microsoft document in at least the limitation of linking product features and tasks as they are related to base the project on the premises of the features of such product. Although Microsoft, as well as other supporting evidence, clearly shows direct linkage between a product development feature and its related tasks, it apparently does not show it to the degree that is described in the claims as well as if such related arts would individually suggest parts of the claimed invention there would be no motivation to combine such teachings to arrive at the claimed invention as they have been claimed currently in this application. As it has been clearly articulated in the recuperative claims steps below;

"managing a release of a product, comprising
describing the product in terms of desired product features of the product;
defining, for each product feature, a plurality of tasks necessary to implement the
each product feature;
linking each task with its corresponding product feature; and
entering data associated with a selected one of the plurality of tasks into a
graphical user interface associated with the selected task."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- GB 1375917 discloses a computer for project management.
